Art Unit: 3729

DETAILED ACTION

1. Amendment to the claims filed on 4/9/07 has been fully considered and made of record.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 3. Claims 1, 2, 5 and 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chiou et al.

As applied to claims 1, 2 and 5, the Chiou et al disclose a method of manufacturing lead frame connectors for use in connecting an optical sub-assembly to a printed circuit board of an optical transceiver module, comprising: stamping a selected configuration of conductors in a conductive ribbon as carrier strip (see Fig. 3); passing the conductive ribbon through an insert injection molding process (see the discussed at

Art Unit: 3729

col. 2, lines 25-30); lead frame connectors having: a plurality of electrical contacts (see varies related Figs 6-8) and a plurality of leads for connecting to the printed circuit board or the like (see Fig. 9 which depicts a connector having a number of contacts for connecting to other structural components such as pcb, or the like, see also bottom section of the abstract). Regarding the singulating the conductive ribbon as carrier strips into individual leadframe after the molding step. It would have been an obvious matter of design choice to manipulating the singulating process in any order including the step of singulating after the molding of the lead frame (see claim 1, lines 4-6) since applicant has not disclosed that the singulating step as taken place after the molding is critical, patentably distinguishing features and it appears that the invention would perform equally well with singulating process as taught by the prior art reference where the singulating being formed prior to the molding, etc.

As applied to claim 2, (see the discussion at col. 4, lines 49-52), note that the contact base 4 of the reference as broadly as readable as the claimed conductive structure as recited in claim 2.

As applied to claim 5, refer to Fig. 12 of the Chiou et al reference which shows a lead frame connector 901 having lead configurations as recited in claim 5.

As applied to claims 6-7, Chiou et al inherently discloses the limitations of claims 7-9, (see Fig. 2 discloses the connecting the connector to the optical subassembly and further to the PCB to obtain an electrical device).

Limitations of claims 8-9 are also met by Chiou et al 's Fig. 2 which shows the connector being connectively attached to an associated sub assembly along with an associated PCB, etc to form a desired electrical device such as transceiver included.

Response to Arguments

- 4. Applicant's arguments with respect to the rejected claims have been considered but are moot in view of the new ground(s) of rejection. Note: the rejected claims do not require the singulating step to be after the molding step therefore, the prior art still define the claimed subject matters of claims 1, 2 and 5-9.
- 5. Claims 3-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. Non-elected method claim 11 is requested to be cancelled.

Interviews After Final

7. Applicants note that an interview after a final rejection will not be granted unless the intended purpose and content of the interview in presented briefly, in writing (the agenda of the interview must be in writing). Such an interview may be granted if the examiner is convinced that disposal or clarification for appeal may be accomplished with only nominal further consideration. Interviews merely to restate arguments of record or

Art Unit: 3729

to discuss new limitations which would require more than nominal reconsideration or new search will be denied. See MPEP 714.13 and 713.09.

Conclusion

8. It is noted that any amendment made to the disclosure and the claims. Applicant requires to point out the support provide numeral references to the claimed limitations as well as support in the disclosure (i.e., page and line numbers and reference number associated with from the drawings) for better clarity (See 37CFR 1.111 and section 2163.06 of the MPEP).

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 . CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Trinh whose telephone number is (571) 272-4569. The examiner can normally be reached on Monday -Thursday 8:00 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on (571) 272-4690. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
